

Coming soon

KYAK

Business apps without code: design tables, forms and menus; lists, document entry, history and permissions come ready.

Design your tables, forms and menu; lists, document entry, history and permissions come ready. In development — leave your details for early access.

Designer: tables, relations, forms, menu and publishing (fictitious demo data)

Highlights

Designer (Studio)

Tables, fields, relations, forms and the menu on one screen; changes stay in draft until you publish.

Visual form designer

Drag fields into place and preview on desktop, tablet and phone. In development.

Ready-made lists and documents

Every table gets a list with search, grouping, column picker and Excel/PDF export; header-and-lines documents with F2 to pick, F10 to save, one transaction.

Formulas, validation, numbering

Line amounts, totals and conditions with the formula helper; rules are checked before saving and document numbers follow a template.

THE PROBLEM

Small needs turn into big projects

- Work run in spreadsheets: version chaos and no record of who changed what.
- Months-long software projects even for a small business app.
- A separate tool for every process your ERP does not cover.

THE SOLUTION

Define, publish, use

- Define tables, relations, forms and the menu in the designer, then publish.
- Lists, search, Excel/PDF export, document entry and record history come ready.
- Use roles and groups to decide who sees and changes what.

WHY IT IS DIFFERENT

Separate database, familiar document entry

- In the cloud every company gets its own database; your data never shares a table with another company's.
- Document entry the ERP way: a lines grid, F2 to pick, F10 to save, written in one transaction.
- What is ready and what comes next is stated on this page; a roadmap instead of date promises.

Roadmap

READY

- Designer and publishing
- List and form screens
- Document entry
- Formulas, validation and numbering
- Record history
- Accounts + stock + orders starter template

IN DEVELOPMENT

- Role, group and user management
- Visual form designer
- Excel template and bulk import
- Trade package templates

COMING SOON

- Field- and record-level permissions
- Delete approval and archive
- Approval workflows
- Dashboards and charts
- Generate a project from an existing database
- Two-way integration with external systems

Frequently asked questions

Is the product name final?

No, the current name is a working title and may change at launch. The address of this page stays the same either way.

When can I use it, and what does it cost?

The product is in development and we do not promise dates. Leave your details in the form below and we will contact you during early access. Pricing is shared during early access.

Does it run in the cloud, or can I install it on my own server?

Both models are planned. In the cloud (SaaS) each company's data is kept in its own database. On-premises, the data stays entirely in your SQL Server; the installer is on the roadmap.

Product facts

WHO IT IS FOR

İş birimleri, ERP danışmanları ve bayiler, BT ekipleri

ACCESS

Tarayıcı arayüzü; bulut (SaaS) ya da şirket içi kurulum

SETUP

Bulutta hesap açılır; şirket içi kurulum paketi planlanıyor

COMPATIBILITY

SQL Server; her kiracıya ayrı veritabanı

LICENCE

Geliştirme aşamasında; koşullar erken erişimde paylaşılır
